ADJUSTABLE DISC THROTTLING VALVE

Hydroplex valves are quarter-turn twin disc throttling valves consisting of two diamond-polished concentric discs, each with two matching orifices. One disc is stationary in the valve and the other rotates to adjust the flow path. This unique trim is specifically designed for precision control of liquids and gases in severe service applications. The valve consists of minimal wear components and meets ANSI class IV shut off. These features result in an extremely durable design with easy field maintenance, increased service life, and reduced operational costs. The design flexibility allows field conversions from manual to automated under pressurized conditions. The patented multistage option allows this valve to handle extreme pressure drops and minimize freezing and/or cavitation. The twin discs and optional wear sleeve are abrasion resistant and direct the flow to the centerline of the piping which greatly extends the service life of the throttling valve.

PRINCIPLE OF OPERATION

Seal leakage classification for this product is an ANSI FCI 70-2 (ANSI B16.104) Class IV shutoff seal. The unique property of the twin disc format separates sealing surface from control surface and maintains a more reliable longer lasting seal.

Upstream disc floats allowing face to face alignment.

- ▶ The front disc floats against the back disc creating a mated interface and assures a positive seal.
- ▶ Differential pressure across the upstream disc promotes sealing, and stabilizes control surfaces.
- ▶ Discs are lapped to within two light-bands of flatness (.00002) to achieve a positive shut-off and maintain precise control.

FEATURES

- ▶ Quarter turn valve (90 degrees full on/off)
- ▶ Direct Mount Actuation (HCI excluded)
- ▶ 5,000 psi MAWP / 3,000 psi MAWP for MiniMax
- ▶ Hardened wear sleeve for high pressure drops and abrasion.* (MiniMax excluded)
- ▶ Multistage DP system utilizing fixed orifice beans for multi-stage pressure drop.* (MiniMax Excluded)

*Optional Features

APPLICATIONS

Liquid & Gas Pressure or Flow Control	Separator Letdown / Dump
Water & Gas Injection	Pump Start-up Bypass
Gas Lift/Plunger Lift	ESP / H-Pump
Manifold Pressure Control	Back-pressure Control
Polymer Injector	Disposal Wells
Gas & Condensate Production	Reverse Osmosis
	Gas/Liquid Meter Skids

TUNGSTEN CARBIDE TRIM OPTIONS

ORIFICES	CV	64 TH INCH EQUIV. DIA.	STAMPED ALPHA
2 ea: 1/8"	0.74	11.3	A
2 ea: 3/16"	1.66	16.97	I
2 ea: 1/4"	2.95	22.6	B
2 ea: 3/8"	6.63	33.9	C
2 ea: 1/2"	11.78	45.3	D
2 ea: 5/8"	18.60	56.85	K
2 ea: 3/4"	22.31	62.3	E

Note: Generally, under high pressure drops, the valves would be set at:
Not less than 40% open for liquids.
Not less than 30% open for gas.

UNIQUE SEGMENTED HUB DESIGN

The HCA, HCI, HCY, & HydraMax models feature our patented hub design.

This feature on the HCA, HCI, & HCY models consists of a unique locking wedge ring that provides greater sealing force and minimizes stress. Typically, throttling valves wear on the downstream side requiring a complete valve replacement. With our patented hub design, only the downstream hub would be exchanged, preserving the remainder of the valve. The HCA, HCY, & HydraMax bodies are ANSI Class 2500 regardless of end connection. To increase or decrease the pressure class of the valve, simply change out the hubs. For example, replacing both hub assemblies rated at ANSI Class 150 with assemblies rated Class 2500 will allow the product to be moved from MAWP 275 psi to a 5,000 psi working pressure.

SEGMENTED VALVE COMPONENT DETAIL

- 1. Valve Body:** Durable and corrosion resistant 316 stainless material.
- 2. Hub Assembly:** Allows easy access to internals without breaking pipe connections, disconnecting or recalibrating the actuator. The design allows for less expensive replacement of the downstream hub in lieu of replacing the whole valve body.
- 3. Wear Sleeve (Optional):** All valve hubs allow for wear sleeves. The wear sleeve is made from a durable Stellite material for abrasive or turbulent environments extending valve life.
- 4. Fixed Orifice Bean (Optional):** The Hydra design allows for placement of a Fixed Orifice Bean to achieve up to a 2 (HCl) or 3 (HCA/HCY) stage pressure drop. It also extends the life of the valve.
- 5. Tungsten Control Discs:** All valves come standard with Tungsten carbide Trim available in sizes up to 3/4".
- 6. Rotator:** The smaller rotator outside diameter reduces operating torque, requiring smaller and less expensive actuators.
- 6A.*Stem Assembly:** The smaller shaft diameter reduces operating torque, requiring smaller and less expensive actuators.
- 7. Manual Handle:** The handle and rotator are specifically designed to resist thread pullout.
- 7A.*Manual Handle (Optional):** The thumb screw on the handle will resist movement of the stem until released.
- 8. Calibration Plate:** Handle equipped with indicator pointing to a Calibration Plate showing percentage and # of 64ths open.
- 9. Direct Actuator Mounting (Not Shown):** Design allows for mounting of common valve actuators with a simplified system to reduce hysteresis.

HCI, HCA & HCY THROTTLING VALVE MODELS

The HCI's simplified design lends itself easily to manual actuation, although it may be automated as the need arises. Because it uses our patented downstream hub, it can be fitted with a wear sleeve or a fixed orifice bean sized by Hydroplex engineering. The HCI uses a smaller rotator allowing for lower operating torques.

The HCA & HCY throttling valves provide a complete package for flow control. The direct mount capabilities reduce the risk of hysteresis while helping to protect the actuator shaft from the elements. The modular hub design allows the valve to handle large pressure drops utilizing our multistage system to include upstream and downstream fixed orifice beans.

END TO END DIMENSIONS

HCI, HCA, & HCY models are also available in 3" or 4" flanges.
Consult factory for further information..

OPTIONAL MULTISTAGE THROTTLING ASSEMBLY

Patented internal multistage pressure drop assemblies are recommended to reduce potential damage due to severe flow conditions. Hydroplex can engineer a multi-stage solution when accurate flow conditions are provided. This solution is primarily used in high pressure drop scenarios to reduce fluid velocity, which is a major factor in erosion, vibration, and excessive noise. Our engineered multistage valve can reduce cavitation and flashing in liquid service, as well as reduce freezing due to the Joule-Thomson effect in wet gas services.

Hydroplex is here to help size the trim for all conditions, especially in extreme applications where the pressure drop would exceed 50% of absolute upstream pressure. The images below show how multi-staging reduces the risk of damage. This is achieved by absorbing the pressure drop over multiple stages instead of the trim set only.

WAFERMAX THROTTLING VALVE

The Hydroplex WaferMax is a versatile control valve that can be tailored to address sophisticated and simple pressure and flow requirements. Its Wafer construction requires minimum space for installation. The Inline flow path minimizes turbulence, reducing erosion and increasing efficiency of the valve. The 3:1 gear ratio provides for precision control, while reducing torque and power requirement for automation. **The gear set is isolated from the fluid stream, preventing contact with contaminants and debris which could compromise the valve operation.**

All valve and trim components are designed to fit in place seamlessly, allowing for quick configuration to meet specific user process needs. The valve trim is fully guided and stable, minimizing vibration and mechanical noise. The free float design of the disc provides the user with enhanced and extended valve shut-off performance. The Twin Disc and Multistage system can help to better manage full pressure drops. The simplicity of the build also means that maintenance is quick and easy, with no special tools required to service the valve.

ALSO AVAILABLE IN 2" AND 3" NPT CONNECTIONS

HYDROPLEX ENGINEERED SOLUTION

GEAR SET

The Pinion and drive gears are isolated from system fluid

TWIN DISCS

Control elements are available in a variety of sizes to accommodate flow and pressure requirement. Standard material is Tungsten Carbide

ACTUATION

The body is predrilled for an actuator mounting bracket for electric, pneumatic or hydraulic actuators

FIXED BEAN

The OPTIONAL Hydroplex Multistage design allows for the placement of a fixed orifice disc upstream of the control discs to achieve a two stage drop within the Valve Body

SEAL MONITOR

Port for pressure sensor to monitor seal integrity

OPERATING LIMITS

Maximum Working Pressure 5000 psi

OPTIONAL FEATURES

Actuation:

For control system integration.

Patented Multistage Pressure Drop System:

Utilizing internal fixed orifice beans for high pressure control.

DIMENSIONS

WaferMax can accommodate all ANSI or API 3" and 4" flanges, and 2" and 3" female NPT connections.

Connection	WMX
3" & 4" Flanges (RF/RTJ)	7.626
2" & 3" NPT (Female)	10.50

APPLICATIONS

- ▶ Automated Well control
- ▶ Split Flow and Manifold Systems
- ▶ Salt Water Disposal
- ▶ Up or Downstream Set Point Control
- ▶ Pump Startup Bypass
- ▶ Electric Submersible Pump
- ▶ H Pump Back-pressure Control
- ▶ CO2 Injection
- ▶ Process Control Valve

CSX THROTTLING VALVE

- 1. Valve Body:** Durable carbon steel body.
- 2. Stem Assembly:** The smaller shaft diameter reduces operating torque, requiring smaller and less expensive actuators.
- 3. Thrust Bearing:** This reduces the friction induced by pressure on the valve stem.
- 4. Tungsten Control Discs:** All valves come standard with Tungsten carbide Trim available in sizes up to 3/4"
- 5. Fixed Orifice Bean (Optional):** The hub design allows for placement of a fixed orifice bean to achieve up to a 3 stage pressure drop within the valve. The fixed orifice bean also extends the life of the valve.
- 6. Wear Sleeve (Optional):** The downstream wear sleeve made of durable Stellite material, adds protection from abrasive or turbulent environments extending valve life.
- 7. Cartridge Assembly:** Holds in the wear components of the valve and allows for easy maintenance.
- 8. SCADA Accessible Sensor Port:** 1/4" threaded port to allow for installation of a pressure sensor or gauge or left open for leak detection.
- 9. Cartridge Wear Pad:** A durable sacrificial surface that when combined with the SCADA Accessible Port (8) provides early warning of abrasive wear before significant valve body damage can occur.
- 10. Injection/Chemical Port-1/4":** NPT port for methanol/chemical injection of liquids or gasses for supplemental process improvements.
- 11. Direct Actuator Mounting (Not Shown):** Design allows for direct mounting of several common valve actuators without the need for couplings or brackets.

CARTRIDGE ASSEMBLY

The CSX cartridge assembly allows for valve service and trim change in-place. Field service can be performed without removing the valve or valve/actuator assembly from the production line. The application of a pressure sensor/gauge in the 1/4" pressure port will notify the operator of pending maintenance requirements.

- ▶ The most significant benefit of this design is that the valve body will not wear out under normal operating conditions. All potential wear components are contained in the cartridge, protecting the body from high velocity fluids and solids. The valve can be rebuilt to like new condition in the field.

MINIMAX CONVERTIBLE DUMP VALVE

Minimum footprint.
Maximum performance.

The Hydroplex MiniMax Convertible Dump Valve is an excellent valve for use on all discharge ports of 2 and 3 phase separators as a quick dump or throttling valve for oil, gas, or water. Optional $\frac{3}{8}$ " wide dump trim available for extremely abrasive fluids.

OPERATING TORQUE

DIFFERENTIAL PRESSURE	OPERATING TORQUE
1,000 lbs.	160 in.-lb
2,000 lbs.	210 in.-lb
3,000 lbs.	270 in.-lb

FEATURES

- ▶ Quarter turn valve (90° full on/off)
- ▶ Direct mount actuation.
- ▶ Convertible Configuration: choose to plumb in-line or 90° right angle to fit your configuration.
- ▶ 3000 psi MAWP
- ▶ Rotary actuated - NO LIFTER REQUIRED!
- ▶ Control discs available in 6 sizes. See details on page 2.

1. Valve Body: Durable carbon steel body.

2. Stem Assembly: The smaller shaft diameter reduces operating torque, requiring smaller and less expensive actuators.

3. Convertible Configuration: With Hex Plug placement, choose to plumb in-line or 90° right angle to fit your configuration.

4. Tungsten Control Discs: All valves come standard with Tungsten carbide Trim available in sizes up to $\frac{3}{4}$ ".

5. Assembly Cage: Allows for easy assembly and disassembly of all internal valve components.

6. Direct Actuator Mounting (Not Shown): Design allows for direct mounting of several common valve actuators without the need for couplings or brackets.

EXTENDED LIFE DUMP VALVES

An Environmentally
Sound Solution compared
to natural gas operated
dump valves.

ELECTRIC OR PNEUMATICALLY ACTUATED

Designed for very high open/close cycles in severe liquid applications, this valve can be internally staged to handle extreme pressure drops with the presence of solids requiring minimal maintenance. The low torque design reduces demand on solar powered systems. *When electrically actuated the valve releases ZERO emissions to atmosphere at rest and during operation.*

APPLICATIONS

Discharge of liquid from: vessels | separators | treaters | knockouts | other similar liquid accumulators

EXTENDED LIFE DUMP VALVES

Reduce your downtime and maintenance in dump applications with the unique technology of Hydroplex valves!

TUNGSTEN CARBIDE TRIM OPTIONS

Twin disc technology available in Cvs up to 89.

Hydroplex's patented in-valve multistage pressure drops can be added in extreme pressure drops. This engineered solution will reduce mechanical erosion and increase the lifespan of the valve.

ASSEMBLY DETAILS

- ▶ 316 Stainless Steel or Carbon Steel construction.
- ▶ 1" through 4" connections.
- ▶ Flanged connections available upon request.

WORKING PRESSURES

All Valves 5000 psi
(or max flange rating)

MiniMax 3000 psig

TEMPERATURE RANGE

[-20° to 325° F]

ACTUATION

Electric

- ▶ Universal Power (AC/DC)
- ▶ Optional Battery Backup

Pneumatic
